

Aaron from Auswest seeds giving advice

Is your LPG connection compliant?

- **Do you have clear access?** - Locked gates, steep driveways, uneven pathways, low-hanging trees, lots of steps and unrestrained dogs are all items which can prevent a gas truck and its driver from accessing your property.
- **Are there obstructions?** - The space around your gas bottle installation also needs to be kept clear. Be sure to keep the area free of shrubs, wood, bins, rubbish and other household items.
- **Do you have your compliance plate on display?** - In order for your LPG Gas bottle to be installed by our staff your NSW Compliance Plate MUST be in full view for the delivery driver to know that it is safe to hook up the gas bottle.

Great advice at field day

Late last month, Hastings Co-op CRT hosted a field day to showcase a range of grasses and rural products currently on the market. There were 37 grasses on display, as well as fencing demonstrations thanks to Whites Wire, a free BBQ and valuable advice from a respected agronomist from Auswest and the Department of Primary Industries. Our farm supplies specialists were also on hand to share their knowledge. Special thanks to everyone who made it out in the rain.

Helps increase milk production

Did you know that we have top quality molasses on tap? For those who aren't aware, molasses is a dark, sticky by-product of processing sugar cane or sugar beets into sugar.

It's generally used as a source of quick energy and minerals for farm animals. Supplementing poor quality hay with molasses will also increase feed intake and improve palatability.

Feeding molasses to farm animals not only improves digestion of pastures/hay, but increases milk production, helps maintain body condition and results in less feed waste.

If you'd like to know more about this service, call in or phone us on (02) 6585 1655.
